

Specification table for the thematic specification groups of the agri-environmental tender

Horizontal arable land use category					
Serial number	Tender specification	Specification type	Subsidy amount EUR/ha/year	Relation between optional specifications	Environmental added value/score
1	All mechanical work on water-saturated soil is prohibited.	Mandatory	59		
2	The use of waste water, sewage sludge, compost containing sewage sludge is prohibited.	Mandatory	59		
3	In areas prone to erosion, the cultivation of tobacco, sugar beet, fodder beet, potato and Jerusalem artichoke is prohibited.	Mandatory	59		
4	Preparation of a nutrient management plan based on a soil analysis with the involvement of a soil expert.	Mandatory	59		
5	Cultivation of green manure crop or application of stable manure at least once during the commitment period.	Mandatory	59		
6	Soil rotation, including the incorporation of organic fertilizers, must be perpendicular to the direction of the slope.	Mandatory	59		

7	Restricted pesticide active substance use.	Mandatory	59		
8	Extended soil testing in an accredited laboratory with the involvement of a soil expert.	Optional	9	Optional (can be selected independently)	1
9	Medium deep loosening at least once during the commitment period.	Optional	18	Optional (can be selected independently)	2
10	In the total area covered by the sub-measure, with the exception of perennial arable cultures and sown fallow, the maximum size of the fields is 5 ha	Optional	33	Optional (can be selected independently)	5
11	When harvesting/chopping fibrous legume forage crop, their grass mixture/and green fallow or bee pasture, an uncut area of 5-10% in cubic measure should be maintained, at a location varying by field and reaping, in contact with the edge of the field at a minimum width of 6 meters.	Optional	15	May only be chosen in case of the cultivation of fibrous legume forage crop, their grass mixture/or the maintenance of green fallow or bee pasture, if the width of the area reaches 6 meters.	4
12	Bird-friendly reaping during the reaping, ensilation and chopping of fibrous legume forage crop, their grass mixture/and green fallow or bee pasture (use of displacement reaping, use of	Optional	6	May only be chosen in case of the cultivation of fibrous legume forage crop, their grass mixture or the maintenance of green fallow or bee pasture.	2

	wildlife deterrent chain and tools, max. speed 8 km/h).				
13	Use of plant protection forecasting.	Optional	1	Optional (can be selected independently)	1
14	During the commitment period, maintenance of a pesticide-free permanent green fallow/bee pasture on at least 25 percent of the perimeter of the tender area, at least 3 m wide.	Optional	16	Optional (independently), but the following may not be chosen in addition: “During the commitment period, maintenance of a pesticide-free permanent green fallow/bee pasture on at least 25 percent of the perimeter of the tender area, at least 6 m wide.”	4
15	During the commitment period, maintenance of a pesticide-free permanent green fallow/bee pasture on at least 25 percent of the perimeter of the tender area, at least 6 m wide.	Optional	33	Optional (independently), but the following may not be chosen in addition: “During the commitment period, maintenance of a pesticide-free permanent green fallow/bee pasture on at least 25 percent of the perimeter of the tender area, at least 3 m wide.”	5
16	In the sowing structure, keeping at least 15% of the fibrous legume	Optional	87	Optional (independently)	6

	forage crop and at least 5% of the green fallow				
17	Cultivation of green manure crop or application of stable manure one more time during the commitment period.	Optional	39	Optional (can be selected independently)	2
18	The exclusive use of verified (sealed) propagating material in the quantity for the area unit that is professionally feasible.	Optional	15	Optional (can be selected independently)	1
19	Involvement of a crop and soil protection specialist in farm management.	Optional	4	Optional (can be selected independently)	3
20	Recycling of by-products (various straw and stalk residues) from the area back into the soil at least once during the commitment period.	Optional	19	Optional (can be selected independently)	2
